Digital Medievalist

http://www.digitalmedievalist.org/

Digital Medievalist is an international web-based community for medievalists working with digital media. It was established in 2003 to help scholars meet the increasingly sophisticated demands faced by designers of contemporary digital projects. Digital Medievalist publishes an open access journal, sponsors conference sessions, runs an email discussion list and encourages best practice in digital medieval resource creation.

Membership in Digital Medievalist is open to anyone with an interest in its subject matter, without regard to skill or previous experience in Digital Humanities or Medieval Studies. Participants range from novices contemplating their first project to many of the pioneers in our field. There are, as of February, 2012, over 700 members of the mailing list.

The project is hosted at the University of Lethbridge, and overseen by an international executive of medievalists with extensive experience in the use of digital media.

Refereed On-line Journal

Digital Medievalist (*DM*) accepts work of original research and scholarship, notes on technological topics (markup and stylesheets, tools and software, etc.), commentary pieces discussing developments in the field, bibliographic and review articles, and project reports. All contributions are reviewed by authorities in humanities computing prior to publication. Contributions to *DM* should concern topics likely to be of interest to medievalists working with digital media, though they need not be exclusively medieval in focus. They should be between 1,000 and 10,000 words. For journal submissions or enquiries: **editors@digitalmedievalist.org**

Mailing list and Discussion Forum

Digital Medievalists use the list **dm-l@uleth.ca** to ask for advice, discuss problems, and share information. The list's collegial atmosphere encourages a variety of conversations: from advanced discussions of problems in the implementation of particular languages or software to more basic questions about how to begin a computing project or find help with software, languages, and formats.

DM on Twitter

All news that is posted to the DM website also eventually ends up on twitter. You can follow the 'digitalmedieval' link at **http://twitter.com/digitalmedieval**

Wiki and FAQ

The DM Wiki contains the project FAQ, and articles by members on various topics of interest to the community. Users are strongly encouraged to contribute to the wiki, by improving current entries, writing new ones, or encouraging experts to contribute on specific questions and issues.

News Server

The DM news server can be used to announce new publications, software, or project, issue calls for papers, or promote conferences and congresses. Anyone is allowed to post news, although it will be moderated.
